

WHAT IF ...

WE THOUGHT DIFFERENTLY ABOUT CLINICS?

OPTIMIZING THE OUTPATIENT ENVIRONMENT

We began by examining the influence a clinic’s physical design has on organizational efficiency. Once we understood that relationship, we developed innovations that improve clinical workflow and productivity.

WHAT WE DID

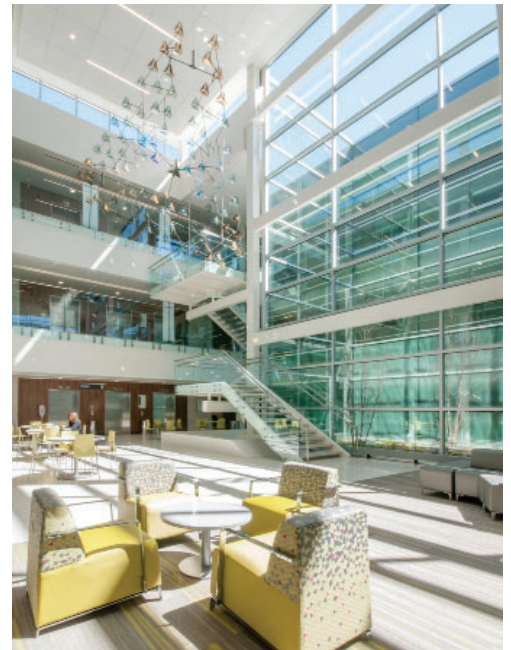

Our team created a case study of the ProMedica Health and Wellness Center project in Sylvania, Ohio. The center was the result of 11 physicians consolidating their practices into a single location. The study was conducted in two phases: existing and post-occupancy.

THE BUSINESS CASE

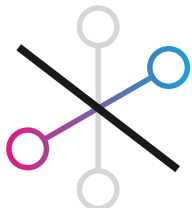

ProMedica aimed to create a collaborative practice and care model by leveraging the building’s support spaces, effectively optimizing the usage of real estate.

THE CHALLENGE

Our team was tasked with the design of a building that could house a collaborative care model for practices that did not currently share staff, space or a consistent operational model. We completed design diagnostics of existing clinical environments through interviews, shadowing, behavior mapping, environmental analysis and spatial analysis. The result was a standardized layout that maintained a consistent workflow for all clinical teams.

WALKING DISTANCE

STANDARDIZATION AND MODULARITY

PATIENT SATISFACTION

CONSOLIDATION/COLLABORATION MODEL

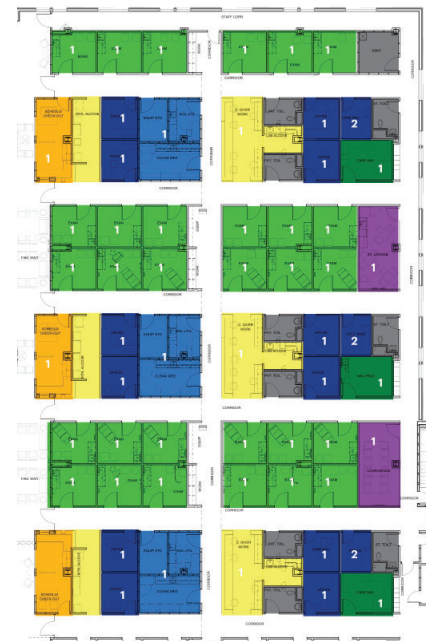

WHAT THE FINDINGS MEAN

i Standardized and modular building layouts create spaces that are adaptable, flexible and efficient.

i Design has a substantial and notable impact on optimizing a staff's workflow.

ROOM TYPE VARIATIONS BEFORE AND AFTER

	WESTGATE		PORT SYLVANIA		DIGESTIVE HEALTH		SUNFOREST	
	PRE	POST	PRE	POST	PRE	POST	PRE	POST
Caregiver Work	3	1	7	1	2	1	4	1
Check-in/out	1	1	1	1	2	1	2	1
Exam	3	1	2	1	2	1	4	1
Special Procedure	3	1	1	1	2	1	3	1
Business Office	0	0	1	0	3	0	3	0
Storage/Cleaning/Equip	3	1	2	1	1	1	1	1
Office	4	2	2	2	3	2	2	2
Staff Collaborative/Break Area	2	1	2	1	2	1	1	1

THROUGH THE CREATION OF A STANDARDIZED PLAN LAYOUT, THE WORKFLOW BECOMES UNIVERSAL AMONG ALL CLINICAL TEAMS.
